

Take your
learning with you.

Mobile Learning

Help your employees when and where they need it most. Mobile delivery options give employees the confidence in knowing that help is available wherever needed, and learning can occur whenever time is available – even during their commute home or while waiting at an airport. Mobile learning provides rich, flexible, and timely interaction between instructors and learners, leveraging the various connectivity options of those platforms (e.g., Wi-Fi and 3G cellular networks). Since mobile content such as audio and video podcasts take significantly less time and resources to create than other types of training (e.g., Web-based and classroom training), your content is delivered more quickly and at a fraction of the cost.

Whether you are developing a series of podcasts to communicate with your employees or implementing an enterprise mobile learning solution for your organization, we can assist you every step of the way. Our professionals have extensive knowledge and experience with modern learning technologies and can help you create or integrate a new Mobile Delivery capability into your current blended learning program.

The Adayana team will help you select the right combination of support content, media, and technology to ensure that your mobile learners and performers have the help they need, including:

- Content Development, Conversion, & Hosting
- Podcast Development and Delivery
- Video Production
- Performance Support Tool Development
- Assessment Development
- Strategic Roadmaps for Technology Enabled Learning
- Integration with Learning Management Systems
- Strategic Communications for Podcast Programs
- Help Desk for Content, Hosting, & Content Player Support

Our mobile solutions work with a wide range of leading platforms and technologies, including the iPhone and Blackberry. Contact us today to learn how Adayana can bring Mobile solutions to you.
